## Overview of Hospital Contacts and Research Units for Industry Sponsored Clinical Trials in Norway

This is an overview of Norwegian hospitals, contact information for clinical trials at each hospital, and the hospitals' clinical trial contract offices. The aim of the overview is to give a summary of the point of contact and useful links to research units for companies wanting to conduct clinical trials in Norway.

The research information link for each hospital contains information about their research strategy, ongoing clinical trials, academic research groups and support. Most of the web sites are in Norwegian. Please use Google translate or contact the contact person if you have questions to the content.

The contact persons at each hospital can assist you with e.g. questions regarding the conduct of clinical trials at their hospital, local information about research opportunities and distribution of feasibility questionnaires to health care professionals within all therapeutic areas.

The Research Units column shows a selection of units carrying out industry initiated clinical trials at each hospital. The list is not complete. Please contact the contact person for contact details to research units and potential investigators for studies in therapeutic areas not listed.

Below the table you will find a list of other relevant web sites and contact info for site identification in clinical trials.
