

Inven2 announces the launch of Inven2 Marketplace, Inven2's new self-service licensing portal

Oslo, 2. December 2025

Inven2 and e-lucid are pleased to introduce Inven2 Marketplace, Inven2's new self-service licensing portal. The platform will simplify access for companies, researchers, and public organizations to Inven2's range of tools and technologies. It will also help Inven2 make routine licensing processes more efficient while maintaining strong oversight and high-quality service.

By collaborating with e-lucid, Inven2 aims to enhance its ability to support high-volume, low-cost licensing and expand the reach of research outputs from Oslo University Hospital, the University of Oslo, and the broader South-Eastern Health region.

E-lucid was established in 2010 at UCLB, the technology commercialization company of University College London, to offer a simple and scalable way for universities to license software, research tools, and social science materials. Today, as an independent company, e-lucid supports over 25 research institutions worldwide and has facilitated nearly 80,000 agreements.

The launch marks an important step in operationalizing a more digital and scalable licensing model for Inven2, positioning the organization to deliver greater accessibility and broader impact across the innovation ecosystem.

"This is an important step toward a more modern and efficient approach to commercialization. We look forward to further developing the platform and inviting both new and established partners to explore the opportunities it offers", says Jens Halvard Grønlien, VP Innovation in Inven2.

"We're really glad to be working with Inven2 on this launch. The Nordic research community is known for moving quickly and giving thoughtful feedback, and we're looking forward to seeing how they use the platform and what ideas they bring to help us continue improving the ecosystem for everyone.", says Jose Fernandez CEO of e-lucid.

About e-lucid

E-lucid Solutions Ltd provides an online licensing platform that enables research organisations to license high-volume, low-cost IP assets through a self-service portal, broadening access to science-based innovations worldwide.

About Inven2

Inven2 is owned by Oslo University Hospital and the University of Oslo. It manages the commercial potential of inventions and research results arising from these institutions, as well as from all health trusts in the South-Eastern Norway Health Authority.
